Dear Sir/Madam
(as addressed)

The Council initially published its Broadmeadows Community Directory early in 1982 and is planning to produce another Directory early next year.

Your Organisation was listed in the first issue and Council would also like to include your Organisation in the forth-coming issue. To do this, we need your help by completing the attached return and mailing back to Council in the enclosed reply-paid envelope.

Your reply at an early date would be appreciated.

Yours faithfully,

B. D. McGregor
TOWN CLERK

RECEIVED
19 DEC 1983

Dear Sir

VICTORIAN YEAR BOOK : MANUSCRIPT UPDATING

In the past your Council has kindly supplied this Office with updated material for inclusion in the Victorian Year Book.

A special edition of the Victorian Year Book is to be produced for 1984 and is to commemorate the 150th anniversary of European settlement of Victoria. This edition will give an overview of the first hundred years of Victoria's history and a detailed study of the development of the State over the fifty years from 1934 to 1984.

Therefore it will not be necessary for manuscript relating to the 1983 edition of the Victorian Year Book to be updated for publishing in the 1984 edition. However, it is hoped to use the 1983 edition as a basis for updating manuscript to be used in publishing the 1985 edition. I will contact you again in mid-1984 with arrangements regarding this updating.

Your continued assistance with this project is very much appreciated.

Yours faithfully

R A Crockett

Dear Mr. McLean,

I am writing to thank you for sending the outstanding amount of $98.15 to the Council.

Unfortunately as there was no accompanying letter, the cheque was banked and filed into our "Clubs" account.

I am glad that the situation has now been clarified and wish you and the Sandringham Life Saving Club every success for 1984.

Yours sincerely,

Adrienne J. Holzer (Miss)

SANDRINGHAM LIFE SAVING CLUB - PURCHASE OF 'SLIP SLOP SLAP' GOODS FROM ACCV - MATTER OF NON PAYMENT OF ACCOUNT

Liz had a phone call from the President of the Club, John McLean (598-8470) to -

a) Complain about John Nankervis being rude to him, over the phone, and in writing.

b) To explain why it hadn't been possible to pay their account up until now.

He complained about John Nankervis' manner on the phone when requesting payment. John McLean hung up on JN. JN then wrote a letter to him, which he has taken exception to and has sought legal advice (he says they told him to sue for defamation of character).

(re the account - they've had trouble with their kiosk which has involved calling in the CIB and all funds were frozen while the investigation was carried out. John McLean thinks the a/c has now been paid. John McLean's wife has cancer - a lot of his time has been taken up looking after her, he claims, and put this forward as the reason why he hasn't been able to look after the kiosk/accounts/club in general.)

CORRESPONDENCE RELATING TO
SANDRINGHAM LIVE SAVING CLUB

Created with Scanner Pro

Hart file

25th October, 1983.

Mr. J.B. McLean,
President,
Sandringham Life Saving Club,
61 Service Street,
HAMPTON, 3188.

Dear Mr. McLean,

Further to my phone call of 15th October and my letters of 22nd July and 9th September (copies herewith), I must again request that you respond to our communications.

If there is some internal problem, you will not find us unsympathetic, but ignoring us and being rude on the phone will not resolve the matter.

As a Statutory Body operating under Act of Parliament, (Cancer Act 1958), we are handling publicly contributed money and must be responsible in our accounting for it. Allowing a debt to remain unpaid for nearly a year is completely unacceptable without reasonable explanation.

I therefore request prompt payment of the account for $98.15 which has been rendered several times, or written explanation if there is some problem.

Yours faithfully,

11/11/83 Paid

Elizabeth

John Nankervis
Community Relations Director.

Dear Secretary,

We refer to our unanswered letter of 22nd July last, and the accompanying copy invoices totalling $448.65 from November and December last.

Your Mr. David Smith has now returned to us a large part of the goods supplied, and we enclose our credit note covering these.

The outstanding is $98.15 and we now request prompt payment of this.

Yours faithfully,

John Nankervis
Community Relations Director.

Dear Sir,

We draw your attention to our unpaid invoices (copies herewith) dating back to 24th November, 1982.

We realize that you are a volunteer body, and that you handled our hats and tee-shirts as a service to the public, but as a Statutory Body answerable to Parliament, we must account for our merchandise.

We would be quite happy for you to pay for sold goods and carry the balance of stock on to next summer. The important thing is that we have a prompt and positive response from the Club, with details of the current situation.

Yours faithfully,

John Nankervis
Community Relations Director.

Dear Nigel,

After all these years, I think it's time I did something about the Bonnard that Bill Keogh bequeathed to me. I have always felt that such valuable possessions should be in public hands anyway, not private, and I would have left it to our Gallery in my Will. But I think Keogh House is the most appropriate home for it, so I hereby formally give it to the Anti-Cancer Council.

I follow the Council's doings with enormous interest - I'm cheering you on from the side-lines!

Best regards to all -

Sincerely -

Ruth

REC'D VL
21 JUL 1983

7th July 1983

The Secretary
Anti-Cancer Council of Victoria
90 Jolimont Street
East Melbourne, Victoria
Australia 3002.

Sir:

This is to introduce myself as a research worker in the area of biochemistry and molecular biology. I obtained my Ph.D(Sc) in biochemistry from Calcutta University. At present I am busy in one of the most interesting areas of molecular biology. Few months back I wrote a letter to Prof. Harrish Busch of Baylore College of Medicine, Dept. of Pharmacology, Texas Medical Centre Texas Houston 77030 expressing my interest to work with him. In reply he wrote me that it is possible to arrange some fund for me if I can arrange a portion of the total fund required during my stay there. I think a standard Post. doctoral fellowship is around $ 12-14,000/annum. If I could arrange $ 6-7,000/annum for two years the rest amount will be available from the Department (Baylore College of Medicine).

I seek your help in this respect. From the Grants Register (1981-83) St. Martin's Ref. Book, Ed. Craig Alan Lerner I have come to know that your organisation helps students willing to carry out research work specially in cancer biochemistry/ chemotherapy. The research project that I have received from Prof. Busch is directly related to cancer chemotherapy. So I think I am eligible to apply for your grant. My need is $ 6-7,000/annum for two years. I think my application will receive its due attention.

Please find enclosed my C.V, Xerox copies of the letters.

Looking forward to hear from you.

Yours sincerely

(AMITAVA CHATTERJEE)

Dear Dr. Chatterjee:

Thank you for your note of May 10, 1983 which arrived today. I will be pleased to sponsor your work in our laboratory if you can obtain funding under the grant proposal you suggest. Although it is possible that we might be able to provide some supplementation, research funding is very limited. We are obliged to support American citizens as you can readily understand.

I am enclosing a proposal which you may participate in. We will be pleased to provide you with the use of all our research facilities.

Sincerely,

Harris Busch, M.D., Ph.D.
Distinguished Professor and Chairman

Enclosure

HB/db

Created with Scanner Pro

SUMMARY

The overall objective of this proposal is to investigate the role of nonhistone phosphoproteins in the regulation of nucleolar activity. Attention is focused on the two major nonhistone phosphoproteins in the nucleolus of Novikoff hepatoma cells, proteins C23 and B23.

The specific aims are: 1) to determine the precise function of proteins C23 and B23, 2) to determine the regulatory role phosphorylation and methylation have on their function, 3) to continue cellular localization studies at the electron microscopic level, 4) to examine the effects of proteins C23 and B23 on in vitro transcription systems, 5) to investigate the effects of antibodies to proteins C23 and B23 on RNA synthesis in a permeable cell system, 6) to clone gene sequences coding for proteins C23 and B23, and 7) to search for factors responsible for regulating the synthesis of proteins C23 and B23.

It is hoped that these studies will increase our understanding of nonhistone protein phosphorylation and methylation, nucleolar activity and gene expression in eukaryotes, with the ultimate goal of exploiting nuclear protein phosphorylation and/or methylation in cancer chemotherapy.

26th May 1983

The Director of the Anti-Cancer Council;

Dear Sir,

I am a Year 11 student at Scotch College. At the moment in our politics class we are studying pressure groups, and my colleagues and I have been asked to write a report on a specific pressure group. I have chosen to write about the Anti-Cancer Council, and I am writing to ask if I can have some information about it.

There are particular things that I wish to know; when the council was formed, why it was formed, is there a formal power structure within the council, and, if so how does it work, what tactics, (i.e protests & media campaigns), are used or employed by you to achieve your objectives, what are your objectives how successful have you been, and finally what sort of people are involved.

Created with Scanner Pro

This information need not by in a letter, phlets or brochures are just as, if not more useful to me. I would greatly appreciate any information, could you possibly send it as soon as possible?

If you can help me I would be very grateful.

Yours

Faithfully,

James Flowers

29 APR 1983

The Secretary,
Anti-Cancer Council of Melbourne,
90 Jolimont St.,
EAST MELBOURNE, VIC., 3002.

Dear Sir/Madam,

I wish to make enquiries as to whether there are any positions vacant, or which may become available in the near future within the Anti-Cancer Council of Melbourne.

Currently I am unemployed and seeking a full time position in the area of Industrial Chemist, Chemical Engineer, Professional Officer, Technical Officer or any other suitable position.

Please find enclosed my resume outlining personal, educational and work experience particulars.

I would appreciate the opportunity to speak with you personally should you have suitable employment for a person with my abilities and can be contacted on: 467-5894 at any time which suits your convenience.

Thanking you.

Yours sincerely,

John L. Kruk

JOHN LUCAS KRUK

Enclosure.

Created with Scanner Pro

R E S U M E

NAME: JOHN LUCIAN KRUK

ADDRESS: 4 Alfred Court, Bundoora, 3083.

TELEPHONE: 467-5894

DATE OF BIRTH: 18/12/1952 AGE: 30 years

MARITAL STATUS: Married, one child.

EDUCATIONAL PARTICULARS:

Graduated from Preston Institute of Technology on 2nd May, 1976. Received "Diploma of Applied Science - Chemistry".

I have also completed post graduate studies at P.I.T. in order to obtain my "Bachelor of Applied Science - Chemistry". This was awarded to me officially in May 1982.

WORK EXPERIENCE:

1.
General Motors Holden - Fisherman's Bend.
Position: PRODUCTION CHEMIST
from: 1/1/76 to 6/6/78

The position as a Production Chemist was to evaluate the position of a chemical process in use and to rectify by chemical addition and follow up queries and or problems when they arose. The valuation and quality control of various plating solutions and chemical processes together with effluent checks of wastes to meet E.P.A. requirements was undertaken.

General Motors Holden - Fisherman's Bend.
Position: MATERIALS ENGINEER
from: 7/6/78 to 1/9/80

Specifically testing metallic and non metallic materials for conformity to G.M.H. specifications. Investigating and developing non metallic materials and checking routine out turned metallurgical samples. The position involved the investigation, testing and problem solving on the various automotive engineering material requirements. Some of the non metallic materials under investigation were adhesives, sealants, sound deadeners, foams and rubbers etc., The objective was to determine if the material shows suitability of use and or find alternatives for their envisaged application.

The major responsibility was to determine how a material was to be used, where do they go, what function it performs, what environment is to be considered, what factors may interfere and can a cheaper process or procedure be employed.

Continued....2

Created with Scanner Pro

Mechanical and physical testing performed in accordance to G.M.H. specifications and or ASTM, SAE, and ISO requirements. Materials evaluated for functionality, wear and durability, tensile strength, % elongation, modulus, creep, ozone resistance, gasahol resistance.

General Motors Holden - Fisherman's Bend.
Position: PLANT CHEMIST
from: 2/9/80 to 23/2/82

As a Plant Chemist I spent 4 months in the Spectographic Laboratory to gain experience in instrumental techniques. I worked in close liaison with Production Laboratory, other departments and individual vendors, Plant Superintendents, General Foremen and Supervisors.

I have gained considerable knowledge of materials and processes together with the analytical instrumental and laboratory techniques required for proper chemical plant operations. I have acted as a liaison officer and associated with the Safety Office, have performed pollution monitoring of air for occupational hygiene of workers and also been involved in the selection of cutting fluids and cleaning compounds for the new "Family II" machinery.

My position as Plant Chemist has allowed me to become involved with Plant and Equipment Personnel, to redesign and repair faulty equipment and generally act as a Consultant.

The following instruments have been used in chemical analysis:-

1. Atomic Absorption Spectroscopy for water pollution monitoring of metal cations and analysis of wear metals from LPG bearings and differential oils.

2. Infra Red Spectrophotometry for analysis and verification of plastics and rubber.

3. Ion Chromatography techniques for the determination of chlorides, sulphates and nitrates.

4. UV visible spectrophotometry for colormetric identification of dye additives.

5. Gas Chromatography - For separation of solvent fractions.

6. Thin layer and paper chromatography for separation of oil additives.

7. Conductormetric, Potentiometric, Titrimetric and Gravimetric techniques have also been used.

2.
Riley Williams Chemicals,
Position: CHEMICAL FORMULATOR
from: 25/3/82 to 4/5/82

This was a temporary position involving the preparation of chemical formulations on a manufacturing scale. Products manufactured ranged from toiletries, soaps, shampoos and adhesives.

31st March, 1983.

TO WHOM IT MAY CONCERN

Mr. John Lucas Kruk has been employed with Analgas Australia Pty. Ltd., for a period of eleven months (1982-83) in the capacity as Sales Engineer, marketing our wide range of instruments.

Since joining Analgas Australia John has shown himself to be a very capable and conscientious worker, co-operative and reliable, meeting all that was demanded of him. He is a well-liked member of the staff.

Due to general decline in business, resulting in decreased profitability, it is with deep regret that we must discontinue John's employ.

I will however, highly recommend John for any position of employment suited to his experience and skills.

Should circumstances in the future permit John to return to our work force, we will gladly re-employ him.

Yours faithfully,

Howard J. Paraman.

26th February, 1983.

Dear Sir,

Recently, I completed a B.Sc. degree at Monash University, majoring in Biochemistry and Immunology.

I am interested in research/laboratory work, especially within the biological field.

I would like to enquire about the possibility of obtaining such a position with your organisation.

Do you have such positions available?

If so, I would appreciate any relevant information which you could supply.

In anticipation of your reply,

Yours faithfully,

V. P. Rother.

Miss Viktoria Rother,

Dr. Bruce A. Messmer
The Hunter Postgraduate Medical Institute
Faculty of Medicine
University of Newcastle N.S.W., 2308

Dear Dr. Messmer,

The Anti-Cancer Cpuncil of Victoria is a statutory body with its own Act of Parliament (photocopy enclosed).

We receive less than 5% of our funds from government sources, the bulk of our money coming from donations from the general public. We have no 'membership' as such. All our donors receive a copy of VICTORIAN CANCER NEWS (Copy enclosed) four times a year.

I have also enclosed a copy of our last Annual Report which outlines our various activities.

If you would like to be placed on the mailing list for these two publications please let me know and we will be happy to do so.

Yours sincerely,

Adrienne J. Holzer (Miss)
Secretary to the Council

The Secretary,
Anti-Cancer Council of Victoria,
90 Jolimont Street,
EAST MELBOURNE. 3002

Dear Sir/Madam,

The Institute is collecting material which it feels may be of value in providing information to members, which includes registrars and senior residents in the Hunter Region. This information will be kept in our central office to be made available to enquirers concerning all aspects of post-graduate medical education including information about various specialist bodies, their requirements for membership and/or training for respective diplomas.

I would therefore be very grateful if you could forward me information concerning your association/society under the following categories:-

1. The constitution of your society;
2. Requirements for membership;
3. Training requirements for your diploma if applicable.

Yours sincerely,

BRUCE A. MESSMER

Mr. T. H. Taylor
P.O. Box 243
COBURG 3058

Dear Mr. Taylor,

Thank you for your letter of the 3rd February, 1983.

The Anti-Cancer Council of Victoria is a statutory body with its own Act of Parliament. We are responsible under the Act to co-ordinate all cancer research activities in Victoria and to promote and subsidize such research.

In addition we run extensive public education campaigns on cancers that are largely preventable (e.g. lung, skin, cervical), and spend a sum of money on providing 'bridging' finance for cancer patients and their families.

We receive less than 5% of our money from government sources. We have a large number of regular donors who very generously support us each year, as well as fundraising activities, memorial and bequest donations.

I think our last Annual Report will give you all the information you need. However, I would be happy to meet with you both and elaborate on any point.

With best wishes,

Yours sincerely,

29 November 1982

RECEIVED
1 DEC 1982

Miss Adrian Holser
Secretary
Anti Cancer Council
90 Jolimont Street
EAST MELBOURNE 3002

Dear Miss Holser

Further to our phone conversation of the 23 November, I am enclosing Identicare units, brochures and price lists.

It is estimated that over one million people in this country have specific medical conditions and these people have long known the need to carry personal and medical details at all times.

It is for this reason I am writing to inform you and your members about Identicare, which can be worn by all members of the community. People will no longer feel self conscious about wearing name bracelets branding them as cancer suffers, etc., and which are not able to convey much needed information in an emergency.

Speed and correct medical care are vital in an emergency situation, but a person cannot always assist. An accident victim may be in a state of shock or unconscious, and unless information about allergies, special drugs etc., is body worn and easy to find, a life may be lost. Unfortunately, accidents on the roads, in industry and on the sports fields are a fact of life, but people in general are not adequately prepared in the event of an emergency.

Hospitals and medical authorities, recommend the wearing of Identicare and the internationally recognisable 'snake and sword' insignia on its lid and the multi-lingual certificate not only assists the ethnic community but also alerts emergency personnel when travelling locally, interstate, overseas or simply enjoying life to the fill.

The N.S.W. and Victorian Ambulance Brigades, the National Roads and Motorists Association, Government Officials, Paramedic Staff, the Federation of Australian Radio Broadcasters and other sectors of the media hail this valuable community project and pledge their full support. Proceeds from the sale of Identicare assist not only the Australian Quadriplegic Association but all Welfare Organisations involved in the self-help project.

Identicare is an attractively designed high quality gold or chrome metallic capsule, about the size of a ten cent piece, which can be worn as a decorative pendant or bracelet. You simply unscrew the face of the capsule and fold into the hollowed area, your own personally prepared information certificate. Amongst other information, you can record your name and address, blood group, important phone numbers and any medical conditions or special treatments a person may wish to be made known to emergency personnel. Identicare is water resistant and can be worn constantly or carried as a key ring - by both men and women.

...2/

Created with Scanner Pro

Adrian Holser
29 Novmeber 1982

Identicare is the result of many months planning by employees of A.Q.A. and since a jeweller has designed and produced a unit acceptable to the public at large all aspects of the project including assembly, packaging, despatching, marketing and accounting are carried out by disabled employees. As such, the price of Identicare to the members of the public is greatly reduced to comparable or imported identification units and the supply and distribution of Identicare and certificates is assured.

I would appreciate the return of the Identicare units after your evaluation, if you wish I can arrange a display stand and brochures.

I would be pleased to meet you to discuss this matter further or phone me on 489 0777.

Thank you in anticipation of a speedy and positive reply.

Yours sincerely

RECEIVED
17 DEC 1981

Dear Miss Holzer,

The International Association for the Study of Pain initiated a chapter in Australia in 1979 with the aim of fostering improved clinical management and research in the field of acute and chronic pain. We are particularly interested in the management of cancer pain and would be grateful if you could indicate,

(a) whether your Cancer Council has ever funded a research project specifically relating to the management of cancer pain and,

(b) whether the Council currently regards cancer pain as being an appropriate area to come within the ambit of research funding by the Council.

For your interests, in the United States of America, the I.A.S.P., has combined with the Cancer Council to encourage well designed studies in the field of cancer pain management. Several years ago, the United States Cancer Council identified cancer pain as an important area in need of special support.

Thank you for your help in providing the above information.

Yours sincerely,

Michael J Cousins,
Councillor, I.A.S.P.

I. Pilowsky,
President, Aust. Chapter, IASP

D R A F T

The Anti-Cancer Council of Victoria has supported one grant ~~for two years~~ in the past eight years directly related to the management of cancer pain.

The research was being done by Associate Professor J. Nayman (Royal Southern Memorial Hospital) and Professor A. W. Linnane (Monash University Biochemistry Department). The project supported was entitled "An investigation of the relationship of blood narcotic levels to the relief of pain".

The project was supported for two years, the first in 1977 for $9,250 and the second to the order of $12,000. ~~but~~ The grant was not continued the following year as it ~~was not good enough to stand~~ lost out in the peer review when placed alongside other requests for grants.

The Council certainly regards the question of cancer pain as important, but any project has to be judged on its scientific merits.

Our Medical & Scientific Committee is a large and highly qualified one representing hospitals, colleges and universities, and any applications for grants are carefully scrutinised.

I have enclosed a copy of a document stating the Medical & Scientific Committee's policies for grant giving as well as a copy of Professor Linnane's and Professor Nayman's research report for 1977 & 1978.

Dear Sir or Madam,

I am a tertiary student at Chisholm Institute of Technology (formerly Caulfield Institute of Technology) and am studying, full time, a double degree course in EDP and Accounting. I am writing this letter seeking employment between December and the end of Febuary, while I am on my summer break. My previous types of employment have been;

- working in a milk-bar part time, for two years,
- in a liquor shop and combination supermarket,
- packing school books in a bookshop, last summer,
- babysitting, which I still do.

Enclosed is a copy of a reference from Mrs Bernshaw for whom I still babysit.

I have no idea of what type of work you have, if any, but I am interested in gaining work experience in the EDP or Accounting field, but I would be prepared to do any other work.

Yours Sincerely,

M. Strauss

BENTLEIGH, 3204

Dear Mrs. Apakian,

Thank you very much for your recent letter and constructive comments. Our Education Committee were most moved by your unfortunate experiences.

We have been considering a leaflet/publication as you describe, for some time, and your letter has now prompted us into action.

In addition our welfare program is being reviewed in an effort to define the range of welfare services available and the gaps that exist. It is hoped that key issues and problems facing both people and agencies concerned with cancer will be identified so that the Council will be able to design and develop appropriate policies to face up to the 1980's.

We are very grateful for your offer of assistance, and we will certainly contact you if we need help.

I have enclosed a copy of our last Annual Report (current one is in print) which you and your family may find of interest.

With best wishes,

Yours sincerely,

22 JUL 1982

Dear Sir or Madam,

May I commend your organisation for the fine work they are doing.

My father died of Lymphthoma this January after being diagenosed the previous March 1981. Looking back on this now I feel again the sense of inadequacy that overcomes the family. — the deep need to help and assist fettered by the lacks of information. Information on what to expect in the form of treatment. We went to the library for Medical books, personally spoke to the local doctors and the hospital specialist and Oncologists. And sifted through what my father was told. We wasted the time of the hospital staff asking for explanations of statements that went over our heads and yet what else could we do? our father was dying, we wanted to know everything so we could help him and make his time with us loving and filled with dignity. finally Dad was lent a book by the hospital social worker. This explained the Cytoxic drugs used to fight different cancers and the side effects caused by them. This little book passed among family and friends became the anchor when the days darkened. When our time with Dad became shorter and shorter and the times when he lay in pain lengthened we returned to the book- pre warned we functioned better. This book helped to dispell many myths kind souls told us - the cold facts were our solace against this disease.

I feel that your organisation could fill this gap with a booklet - possibly along the lines of the one published by the heard foundation - for heart attack victims and their families. To many people facing a doctor in a major hospital is an ordeal and they cannot remember all that was said after the interview- a booklet read in the quiet of ones home, can be a great aid to handling the illness and imminent death of a special person. We found and too late that the Peter Macallum hospital offered at home services - possibly these services could also be listed. and the book would need to be published in many languages. and freely available at clinics and the local doctors surgery. If I or my family could assist you and your organisation in compiling such a booklet we would be delighted.

Yours Sincerely

Lorraine Apakian (MRS.)

Miss J. Radford
25 Hillcrest Avenue
KEW 3101

Dear Miss Radford,

Adrienne Holzer passed your letter to me and I have read it with much interest.

First of all I do not think there is much difficulty in accepting a possible link to your exposure to uranium and your breast cancer. Although we can never be sure in the individual case. Most of us would accept the probability of cause and effect.

On reflection I believe that the Anti-Cancer Council should not endorse your protest campaign. My reason for this is no doubt the one you will suspect - we do not wish to induce fear in the substantial number of people in Victoria who will be needing radiotherapy in the future.

Having said that I must confess to being impressed by your reasoning. From my point of view the number of cancer deaths resulting from Hiroshima were remarkably small in comparison with people dying directly from the blast or indirectly from the radiation illness shortly after. I have always thought that death from acute or sub-acute radiation sickness was far more horrible than the long term grip of cancer.

Thanks very much for the courtesy of your letter.

Best wishes,

Yours sincerely

Dear Miss Holzer,

Thank you for your personal letter responding to my reaction to the resentment felt by the Ballarat committee to the centralised approach of the Victorian Anti-Cancer Committee. I have relayed your letter to my friends in Ballarat.

Meanwhile may I take this opportunity to inform you of an action I, myself, am taking in an attempt to arouse general support for protest against nuclear warfare.

I worked in the British Atomic Energy Project in 1947-8, just after WW II, when Britain was setting up its establishment at Winscale. As I was an expert spectroscopic analyst, I was employed on the spectrographic analysis of Uranium ores. There were 15 in our unit, I was the only Australian, and the only person involved directly with spectrographic analysis. For this work I had to crush and sample Uranium ores, press the powder into a cavity in a graphite rod, strike an arc with graphite as one electrode, then analyse the light emitted by the high temperature excited ore. This was before the days when people wore radiation badges to monitor radiation doses. I always, as a chemist does, returned my spatula to the top breast pocket of my lab. coat – a position which would have enabled powder to make its way down clothing to the breast, below. Well, about 15-20 years later, I developed breast cancer, had a radical mastectomy, suffered no further problems, except the devastating weakness

Created with Scanner Pro

following + accompanying radiotherapy, but returned to work and life with no problems. Later on I did connect the cancer in my mind with the work I had been doing on Ur one, ~~on~~ particularly when I realized (from reports coming from friends in Britain) that 9 of the group of 15 had died of cancer - area of body not reported, and of the other 6 I was the only survivor, and I had had cancer. The cause of death of the other 5 I do not know. Then, when I developed a second cancer of the urogenital, in much the same position of the first, my suspicions as to cause intensified, and remains so. Once more I went thro' the devastating enervation of radiotherapy, and it became borne in upon me, that those of us cancer sufferers who have had radiotherapy are the only ones in the WORLD apart from Hiroshima etc. survivors who know what Radiation sickness feels like. I have had strong feelings against nuclear weaponry for years (I changed from atomic energy work to spectroscopy of Penicillin - 1948), and recently I found myself being more + more worried by the world's race towards nuclear horrors as I experienced once again the radiation effects, so, believing that it would be possible to gain support for 'protest against nuclear war' from those people who had experienced radiation illness, however (and that in controlled, monitored doses) I wrote letters to all the daily papers urging support from them and from those of their supporting relatives or friends who had seen the effects on their loved ones. I headed the letter "a plea to those who Care". But none of the papers would

Created with Scanner Pro

publish it, and although one Editor had the courtesy to give a reason which was that he feared that it might "frighten off" people who were actually needing radiotherapy - I could see the strength of the objection, but still felt I should do something along these lines. So, as a member, now, of the "Women's International Federation for Peace and Freedom", I am going to them to urge support from all who will support the protest, including cancer sufferers.

Because, everyone both pro and anti nuclear weaponry, knows that death and pain from cancer is an inevitable consequence of a nuclear explosion, and there is one section of the world which knows just what that feels like, so is in a position different from that of most of the military leaders, of being able to say "No! No! - not that for the world's population"

Please excuse the length of this - I'm writing it, mainly, to ask whether you think a letter to Cancer News might be accepted, and might gain support.

I realize that there is no way of 'PROVING' that my cancer was UR one induced. The Medical profession, however is in no better position for saying that it was NOT that cause. Their statistics for family breast cancer are far less significant than the significance of my 10/15 cancers in a unit dealing with one analysis. (I know what I'm talking about, here, I'm a retired scientist). Also, the medical profession is in an ideal position to know the pain and trauma of cancers, and to know the need for support and assistance for the patients -

Miss J. T. Radford,
25 Hillcrest Avenue,
KEW, VIC., 3101

Dear Miss Radford,

Thank you very much for your recent donation towards the work of the Council. Your continued support is greatly appreciated.

I apologise for the delay in replying to your letter, but I have just returned from leave. Your comments are of great concern to me. However, I feel that until I receive a formal complaint from either the Ballarat committee or an individual concerned, then I am restricted in any action I might take.

I should like to add that we have many country supporters all of whom we value very highly. They are amongst the most hard-working and perceptive of our helpers.

I have enclosed a copy of our last Annual Report which you may find of interest.

Yours sincerely,

Adrienne J. Holzer (Miss)
Secretary to the Council

To The Secretary
anti Cancer Council of Vic.
Appeals Section

Dear Sirs,

I have been donating to the anti cancer council for several years, and was recently horrified to learn from my Ballarat friends, of the bureaucracy and insensitivity shown to that local Group by the Central Melbourne (Victoria) Council.

Will you please investigate this matter more sensitively remembering, if you ever knew it, that local people are far more aware than you are of the individual needs of their local population, and that they very rightly resent being treated purely as a fund raising organisation, when for many many years their efforts have been the truly caring ones of giving support and comfort at the individual and family level. Knowing many of the people personally as I do, I know that they are busy folk who have far better outlets for their time than joining the social "do-gooding" fete committees so often run in country towns for fund raising. Perhaps you could investigate the (lack) qualifications of the personnel whom you have despatched to Ballarat for discussion with their group. And, this time, perhaps admit before you start, that being a country person does NOT mean the person is either stupid or ill informed of local matters. I was made very aware of the hurt you had inflicted on a group of people dedicated to helping their own community needs. And it has made me question the worthiness of the Council I have supported for years.

Councillor R. King,
Chairman,
Ballarat Branch Regional Cancer Committee,
406 Dawson Street,
SOUTH BALLARAT, 3350, VIC.

Dear Councillor King,

At the last meeting of the Patient Welfare Sub-Committee held on 18th August, 1981, procedures for dispensing of funds were reviewed. After considerable discussion it was agreed that procedures should be centralized - meaning that all requests for funding must now be made via the A.C.C.V. Social Worker.

As our policies about welfare spending have not changed, I would anticipate that this transfer of processing will be uncomplicated.

The delay in notifying you regards this policy change was caused by my leave for annual holidays.

Yours sincerely,

Barbara Donnelly (Miss)
Social Worker

Mrs. A. J. Keele,
157 Sherbourne Road,
MONTMORENCY, 3094

Dear Mrs. Keele,

I wish to acknowledge with thanks receipt of your letter of the 8th March, 1982 requesting that your name be deleted from our mailing list as you did not wish your donation to the Council to be wasted on postage.

The three or four newsletters you have probably received are the "VICTORIAN CANCER NEWS" which is distributed by the Council quarterly to all donors in their first year. After that they have the option of discontinuing receiving the newsletter.

The Council regards "VICTORIAN CANCER NEWS" as one of its most important educational tools. We can directly inform our supporters of trends in cancer research, how we are spending the money raised, and ways of the early detection of cancer.

We have, in fact, received many replies from people who have benefited directly by advice given in the newsletter.

As you have requested we have deleted your name and address from our records.

Yours sincerely,

Adrienne J. Holzer (Miss)
Secretary to the Council

Mr. E.E. Dunlop,
Anti-Cancer Council of Victoria,
90 Jolimont Street,
East Melbourne 3002

9 March 1982

Dear Mr. Dunlop,

About a year ago I made a small donation to your cause and since then have been sent various letters and data pertaining to the Council.

My donation, as I said was very small and I feel that all it contributed to was the cost of postage for these various letters.

As a result I wish my name and address deleted from your mailing list.

My donation was, I thought, to be used in aid of research and not towards the huge profits of the P.M.G.

Yours sincerely,

Angela J. Keele

Dear C.M. West:

Thank you very much for your helpful letter. I have written to the Australian Consulate office in San Francisco as you suggested.

Regarding our proposed journey to Australia, we have two reasons for making the trip. First of all, having read so much about your interesting country for a number of years, we simply want to "come and see" for ourselves. Melbourne and the southern part of the mainland and Tasmania are especially appealing to us.

I cannot imagine myself being only a tourist for several months in Australia, but would like to meet with people in your health agencies or businesses (private sector or government) who would be interested in developing or improving smoking withdrawal programs. Possibly someone in the business of presenting weight reducing programs to the public might be interested.

I have been teaching quit smoking programs since 1976 and got my start with the American Cancer Society. Since then, I have organized my own program called SmokeOut Seminars of America, a seven-session, psychologically sound and successful smoking cessation program.

I suspect that my need at this point is to locate and contact individuals who would be interested in discussing the matter. If you can forward my letter to interested individuals, I would appreciate it.

Regarding specific information on living conditions and costs in Australia, if you could send me a copy of the Melbourne paper and the largest circulation paper published in Tasmania, it would be helpful. I have enclosed a five dollar bill for this purpose. Primarily, I am interested in the monthly cost of apartments, the cost of meals in restaurants and the cost of food in grocery stores.

Thank you once more. I have asked my wife, who works for the Alaska State Division of Tourism, to mail you a copy of the "Worlds of Alaska." This magazine is the promotional piece used to invite tourists to this far north country.

I hope we do have a chance to meet at some point in the future. I am looking forward to that time. Oh yes, is it Mr. or Ms. West? Thanks.

Sincerely,

Robert R. Wheeler

YES

INTERPHIL MEMBERSHIP SUBSCRIPTIONS

1982

At the meeting of the Board of Directors of Interphil held in London on 24th November, members considered the whole question of rates of subscription to Interphil. Membership subscriptions in the past have been held down to an unrealistically low level in accordance with the Directors' belief that membership of an independent voluntary body should place the minimum financial liability upon those who support it in the development of the principles and the practice of philanthropy.

At this meeting it was however felt very strongly that Interphil could not continue to be a viable organisation with the current levels of membership subscription and with ever increasing inflation the members felt there was no alternative but to increase the rates. It was accordingly decided that as from the 1st January 1982 membership would be increased as follows:-

- organisations, corporations & institutions US$ 250.00 or equivalent
- private individuals US$ 25.00 or equivalent

Interphil's activities were discussed in detail and it was strongly felt that for the forseeable future Interphil should concentrate upon activities wholly within its competence and finances. To this end, it was decided that it should be primarily concerned with arranging one international conference each year on matters of significance to philanthropy. It should organise the Sforza Memorial Lecture bi-annually to provide a platform for a distinguished speaker to discourse upon the independent voluntary sector; and it should furnish information on matters affecting this field providing three newsletters a year issued free to members.

Interphil is taking a new breath of life. I do hope you will support it with your membership, participate in its activities, and help with the exchange of information.

INTERPHIL NEWSLETTER

EDITOR: HARRY KIDD

INTERNATIONAL STANDING CONFERENCE ON PHILANTHROPY

NO. 12. FEBRUARY 1982.

CHARITY AND A BROADER PUBLIC

Ninety per cent of the money to be raised by any successful charitable appeal, we have been told by fund-raising consultants, must come from ten per cent of the donors. Is it still true? How long will it remain so? Will there continue to be a wealthy minority both able and willing to sustain the burden?

For their own financial security charities need to widen the public from which they receive their funds; but not for financial reasons only. In the long term the question whether they continue or whether their activities are taken over by the state may depend on the political and moral support of a wider public. For these reasons if for no other we must welcome the development by United Way of the system of pay-roll giving described in an article within. Like most of the best ideas it looks entirely obvious, once someone else has thought of it. It represents, however, one of the most significant developments in the fund-raising field. Its promotion calls for tact, skill, and hard work. We must hope that these will be forthcoming.

As the public on which it depends grows wider, charity must recognise more and more clearly its accountability to that public. One aspect of this recognition is demonstrated in the presentation to its public of its financial reports and accounts – a subject to which the accounting profession world-wide is devoting closer attention. In our last number we reported on a Canadian study. In the present number we note the completion of an Australian study and review the published report of another carried out in the U.K. Such studies are to be welcomed not only for the opportunity that they offer to charity to improve its reporting but also for the increased awareness and understanding of the nature of charitable undertakings that they create in the accounting profession, which has hitherto often been content to regard a charity as an aberrant from the norm of a commercial undertaking. It is not. It is a different animal altogether, existing in its own right, with its own accounting needs and problems, which are at long last beginning to attract the study that they need.

UNITED WAY COMES TO EUROPE

Interphil's Early Involvement

Interphil has had close connections with the United Way movement since 1976. Our President, Dick Livingston Booth, is a Governor of the recently formed United Way in Great Britain and three of our directors, Bill Aramony, Fred Freeman and John Glaser are associated with United Way International.

United Way International is a world-wide movement, whose purpose is to enhance people's personal involvement in the life of their community and in doing so develop their community's charitable fund-raising capacity to the fullest. Every national United Way movement independently promotes freewill giving within the community on the basis which it considers most appropriate.

The close association between Interphil and United Way International led directly in 1977 to the formation in Merseyside, England, of the first United Way Pilot Operation in Europe. The aim of the Pilot Operation, which has developed significantly, has been to demonstrate the feasibility of providing a new source of funds for charitable purposes through payroll giving, i.e. individually authorised deductions from the pay packets of local workers.

Taxation relating to contributors gifts can be recovered by United Way under the U.K. covenant system.

Earlier this year the four Interphil directors mentioned were responsible for a decision to launch a United Way movement in Great Britain. This will operate in close association with the Charities Aid Foundation. United Way International believes the new paths of donor participation United Way is to develop in Great Britain will be followed in the years to come by many other nations.

United Way in Great Britain.

United Way in Great Britain, hereafter referred to as 'United Way', is a charity formed to raise and distribute tax-recoverable payroll and other gifts to benefit ALL charitable bodies – serving within the indivdual contributor's local area – and ANY other charitable purposes – national or local – which contributors and local committees choose to support.

It is the essence of the United Way approach in Great Britain that donors within Donor Groups be offered

SOME NEWS FROM AUSTRALIA

Philanthropy Conference in Australia

The Fifth National Conference of The Australasian Institute of Fundraising (TAIF) will be held at the University of Sydney from 31st January to 3rd February, 1982. The Conference is open to all interested in the field of philanthropy, whether members of TAIF or not. Speakers include special guests from U.S.A., eminent Australian businessmen, leading psychologists and motivators, and outstanding practitioners in fund-raising and public relations. As well as plenary sessions, 'table topics' groups and workshops are scheduled. Two hundred participants are expected.

TAIF is an association of fundraising practitioners in Australia and New Zealand, with active chapters in Melbourne, Sydney, Brisbane, Adelaide and Perth.

Lions Clubs in Major Move

Australian Clubs of Lions International, an organisation of businessmen with more than one million members around the world, have established a multi-million dollar Public Health Care Foundation. Lions Clubs in New South Wales have set an initial target of $2.5 milllion for a drive to add funds to the Foundation. This move in community service follows upon the very successful establishment several years ago of the Lions' Clubs Save Sight Foundation with funds of over $1 million.

Call for Charities to Show Accounts

A university study estimates the Australian annual figure for philanthropy at between three and four billion dollars and argues strongly for Australian charities to be made more accountable to donors and governments.

The University of Sydney's Accounting Research Centre published its findings in July, 1981, and suggested that Australian philanthropy (or at least that part which is readily measurable) was 3.56 per cent of the gross national product in 1978.

However, the survey, by F.J. Williams and J.R. Warfe, was highly critical of the accounting procedures and public reporting practices employed by charities, and the way in which government regulators have been fulfilling their legal responsibilities with respect to determining . . .

* the efficiency of charity management
* whether funds were applied to meeting charities' stated objectives
* whether these objectives were effectively achieved.

Professor Murray Wells, professor of accounting and director of the university centre, said that the conditions applying to company annual reports and financial statements should apply to charities 'because they are using public money'. Most charities did not have 'owners' in the conventional sense and it was important that 'the public to whom charities hold themselves out should have confidence in the bona fides of each organisation'.

KAM

CHARITIES AND MAILING LISTS

A study recently carried out for the Council of Europe by John Braun, Consultant in European and Consumer Affairs, on the use of mailing lists has revealed the extent to which charities and religious bodies use mailing lists. Address lists are an indispensable tool of direct communication not only in commerce but also for social and humanitarian bodies, charitable institutions and churches. An estimate for 1977 puts the figure of money raised in the United States by direct mail by way of contributions by donors to organised philanthropies at $10 billion. The US postal services claim that in 1974 80% of all contributions to non-profit charitable and public interest organisations were raised through activities involving dirct mail. An example from Europe is the Swiss Air rescue patrol, which uses direct mail to appeal to its half million patrons and the public for funds.

Large charities have their own computers, smaller ones use bureaux. The use of mailing lists for these purposes varies according to their sophistication and size in the same way as for commercial companies.

The author has found that charity mailing lists are generally well protected against the type of abuse which sometimes occurs in the commercial sector, ie use, sale or renting of people's names and addresses for purposes other than those for which the list was originally drawn up. 'Charity list users prefer not to make their own lists available to others – they want all the money they can get for their own charity. Furthermore, people are more sensitive in their relationships in this area and tend to look upon their charitable gifts as a personal matter.'

FH

THE DEVIL IS IN THE DETAIL....

A Swiss foundation helping the restoration of Venice received a valuable donation from a German donor: an expensive machine for cutting stones.

Unfortunately, the customs officer in Venice could not allow the import-tax privilege to this gift because a Swiss foundation is not charity under Italian law.

Then an old treaty between Switzerland and Italy was discovered giving mutual recognition of foundations. Although it had gathered considerable dust in the foreign offices in Rome and Berne, it was still valid.

Alas, the Venice customs officer was not to be moved because nobody could give him *il numero* (every Italian foundation being recorded under a registration number, which has to be cited whenever tax privileges are applied).

The fathers of the Swiss-Italian treaty had never thought of such trivial details.

(Discussion of this matter continues).

FH

From the European Parliament

VAT AND CHARITABLE BODIES

Mr Price recently asked the Commission of the European Communities which EEC member States, if any, exempt charitable bodies from paying VAT on goods purchased by them or services supplied to them and under which EEC derogation such exemption is permitted. (Written Question No. 206/81).

On behalf of the Commission, Mr Tugendhat replied that none of the nine member States which apply a Value Added Tax (Greece being the exception) appear to provide for a general exemption of supplies of goods and services to charitable bodies. However, the United Kingdom provides a limited exemption in the form of a zero rate for radios and certain equipment bought by organisations such as institutes for the blind.

This limited exemption is permissible under the terms of Article 28 (2) of the Sixth Council Directive No. 77/388/EEC on VAT (1) which allows member States to continue to apply on a transitional basis certain exemptions with refund of input tax (zero rates) which were in force on 31 December 1975.

Mrs. Elsie Robertson,
Room F9,
Creton Close,
York Street,
GLENROY, VIC., 3046

Dear Mrs. Robertson,

Thank you very much for your recent letter and for telling us that you have remembered the Council in your Will.

More and more people are choosing to remember the Council in this way, and this helps us tremendously in our research, education and welfare programmes.

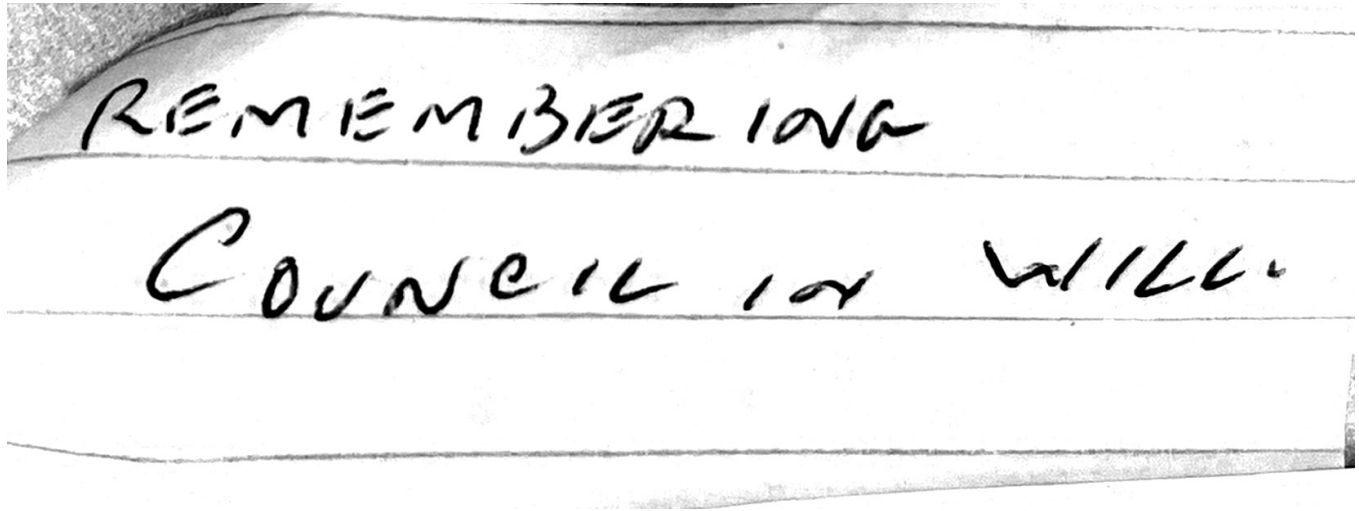

As requested we have removed your name from our donor roll and you will not receive any further literature from us.

With very best wishes and thanks,

Yours sincerely,

(Miss) (Adrienne J. Holzer)
Secretary to the Council

Tues May 26

Dear Adrienne

The enclosed is background information about Victorian Medical Research Week.

Do you think that Mr Keith Rowell or some other patron of the A.C.C.V. would be interested in coming to the dinner as my guest?

With kind regards

David Barkla

Yes — no one going.

Victorian Medical Research Week

JULY 27th – AUGUST 2nd, 1981

Patron: The Hon. R. J. Hamer, E.D., MP., Premier of Victoria

Convenor: Dr. J. Eisman
Department of Medicine
Austin Hospital
Heidelberg 3084

Dr. D. Barkla,
Department of Anatomy,
Monash University,
CLAYTON. 3168.

Department of Nephrology,
Royal Melbourne Hospital,
Grattan Street,
PARKVILLE, Vic. 3050.

Dear Dr. Barkla,

This year, Medical Research Week is to be opened by the Premier at a formal dinner on Monday, July 27th. The aim of this dinner is to enjoy a pleasant evening, in which research workers and lay people will mix in a 1 : 1 ratio to encourage convivial lobbying.

Our guests will include the Premier, Mr. Hamer, Sir Geoffrey Badger, Dr. David de Souza, Dr. Tom Hurley, Prof. John Rose and a number of Victorian politicians. We estimate a cost of $20.00 per head for the dinner, and propose to offer a table of ten or part share of a table, as required, to those institutions who are contributors to V.R.M.W. Numbers are limited because of the large number of institutions involved.

It is not intended that the dinner should be simply a get-together for research workers, but that it should act as a forum for lobbying and publicity. Accordingly, I would be grateful if you could advise me whether your institution would care to take a table or part of a table, and to invite an equal mix of research workers and lay people you consider appropriate. We hope to see the 'third tier' e.g. businessmen, politicians, lobbyists, well represented. To avoid duplication, we would like the names of those people you propose to invite. I would be most grateful if you could complete the enclosed form and return it to me as soon as possible.

Yours sincerely,

Judy Whitworth

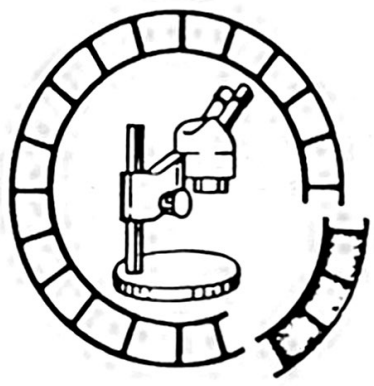

Judith A. Whitworth.

Other members of the University involved in V.M.R.W. are :

Professor M. Holman Physiology
Mr. P. McLennan, Pharmacology

Victorian Medical Research Week

27th July - 2nd August, 1981

Medical Research.....

a matter of life and health

Created with Scanner Pro

AIMS

- TO EMPHASIZE THE IMPORTANCE OF MEDICAL RESEARCH TO THE GENERAL PUBLIC.

- TO STRESS THE NEED FOR ADEQUATE FUNDING OF MEDICAL RESEARCH BY GOVERNMENT, BUSINESS AND INDUSTRY.

- TO HIGHLIGHT THE ACHIEVEMENTS OF AUSTRALIAN MEDICAL RESEARCH AND ITS PLACE IN THE WORLD CONTEXT.

- TO FOSTER VOCATIONAL INTEREST IN MEDICAL RESEARCH AS A FULFILLING AND WORTHWHILE CAREER.

Created with Scanner Pro

EVENTS OF MEDICAL RESEARCH WEEK

1. A Hall of Health Display in the foyer of the Bank Of New South Wales, 360 Collins Street, City. To be opened by the Premier, the Honorable R.J. Hamer, E.D., M.P. Seventeen booths depicting medical research projects will be manned by medical research staff from 9.30 to 3.30 p.m., July 27th-31st.

2. Open Day on Sunday August 2nd from 2.00 to 5.00 p.m. at the following Medical Institues:

Institution	Topic
Walter & Eliza Hall Institute, Royal Melbourne Hospital, Parkville.	Bodily defence to disease.
Department of Human Nutrition, Deakin University, Waurn Ponds via Geelong.	Nutritional problems in Australia.
Department of Pharmacology, Monash University, Clayton.	The benefits and hazards of drugs to the community.
Baker Medical Research Institute, Alfred Hospital, Prahran.	Heart disease.
Department of Medicine, Heidelberg Repatriation Hospital, Heidelberg.	Cancer, Diabetes, High Blood Pressure.

(See Appendix 1 for further details).

3. A Formal Dinner attended by the Premier the Honorable R.J. Hamer, E.D., M.P., medical research scientists, politicians and business leaders. To be held on Monday July 27th at 8.00 p.m. at The Long Room, Old Customs House, 400 Flinders Street, Melbourne.

4. Talks by medical researchers at Service Clubs.

Created with Scanner Pro

WHY SUPPORT MEDICAL RESEARCH?

Most of the advances of modern medicine such as development of vaccines effective against polio, smallpox, German measles and cholera, the discovery of drugs for the treatment of bacterial infection, high blood pressure and mental illnes have saved countless lives and saved enormous sums of money. Thus money spent on research is an excellent investment. But much more research is needed to conquer other diseases.

WHY IS MEDICAL RESEARCH IMPORTANT IN VICTORIA?

Victoria attracts the largest portion of the medical research budget from the Federal Government. Melbourne boasts a number of centres of excellence in medical research which are recognized internationally. Thus it is a small but important industry employing a substantial number of skilled people.

WHY ARE THE FUNDS INADEQUATE?

Per head of population, Australia spends the equivalent of two packets of cigarettes on medical research each year. Canada, Britain and New Zealand spend twice as much while the USA spend 13 times as much. There are many potential research programmes in Australia that are not being funded; more money is needed if Australia is to continue and expand its research efforts.

(See Appendix 2 for fuller details).

Appendix 1

DETAILS OF OPEN DAYS,
VICTORIAN MEDICAL RESEARCH WEEK

SUNDAY AUGUST 2nd, 1981, 2.00-5.00 p.m.

Institution	Convener	Topic
Walter & Eliza Hall Intitute, Royal Melbourne Hosp., Royal Parade, Parkville.	Ms. Roselyn Church, (347-1511)	"Bodily Defence to Disease"

Floor 7: Audio Visual Show "Introducing the Hall Institute"

Floor 6: Cancer Research

Floor 5: Cellular Immunology

Floor 4: Experimental Pathology, Immuno-Parasitology

Floor 3: Clinical Research

Floor 2: Molecular Biology

Floor 1: (Sydney Rd.) Biochemistry and Biophysics

Ground: (Basement) Access outside main building entrance. Electron Microscopy

Institution	Convener	Topic
Department of Human Nutrition, Deakin University, Pigdons Road, Waurn Ponds via Geelong	Prof. M.L. Wahlqvist (052 47-1111)	"Nutritional Problems in Australia"

Nutritional Problems in Australia

"The relationship between food composition and nutritional problems in Australia will be demonstrated. Particular attention will be paid to dietary fibre, folic acid, zinc, lipids, carbohydrates, and food toxicants. Research programmes in the Department of Human Nutrition at Deakin University are currently focussing on improved techniques for food analyses of these components as well as the extent to which variations in the intake of these substances relate to nutritional problems in Australia."

Created with Scanner Pro

Institution	Convener	Topic
Department of Pharmacology, Monash University, Clayton	Dr. Peter Nolan, (541-2751/541-2750)	"The Benefits and Hazards of Drugs to the Community"

The Benefits and Hazards of Drugs to the Community

Three poster displays and a computer assisted simulation of the clinical factors associated with safe drug prescription.

The three poster display will be:

1. DRUG BENEFITS VS HAZARDS.

The benefits of modern drug therapy to life expectancy in our community and some of the problems which have evolved with the increase in self medication and the higher incidence of environmental polutants.

2. PRINCIPLES OF DRUG THERAPY.

The principles and rationale of different forms of drug therapy together with examples of some of the most common conditions which are successfully treated with drugs.

3. DRUG DEVELOPMENT.

An exposition of the events which leads from the chemical synthesis of new drugs to their eventual use in medical practice. This will encompass the pharmacological and toxicological screening programmes required to determine the actions, efficacy and safety of a new drug, the applied investigations of clinical trials and the regulatory requirements which the new product must satisfy before becoming available for medical use.

The computer exhibit will provide a programme which allows the user to consider some of the practical issues which must be taken into account when prescribing drugs to treat various conditions.

Institution	Convener	Topic
Baker Medical Research Institute, Alfred Hospital, Commercial Road, Prahran.	Mr. M. Downes, Dr. P. Blomberry, (51-1252)	"Heart Disease"

Heart Disease

1. Professor P. Korner's Laboratory - Brain amines.

2. Dr. P. Nestel's Laboratory - Blood Fats and Heart Disease.

Created with Scanner Pro

3. Dr. W. Anderson's Laboratory - Hypertension and the Kidney.

4. Dr. J. Angus' Laboratory - Drugs and the Heart.

5. Dr. G. Jennings' Laboratory - Exercise and the Heart.

6. Risk Evaluation Service.

7. Dr. A. McLean's Laboratory - Clinical Pharmacology.

Institution	Convener	Topic
Department of Medicine, Repatriation General Hospital, Heidelberg	Dr. J. Eisman, (490-2788)	"Cancer, Diabetes, and High Blood Pressure"

Cancer, Diabetes, and High Blood Pressure

1. The underlying causes of high blood pressure (Dr. W.R. Adam and Dr. T.O. Morgan) and of blood vessel disease (Professor T.J. Martin).

2. The role of dietary fibre in bowel cancer (Department of Surgery).

3. Complications of diabetes mellitus (Dr. R. Larkins).

4. Breast cancer and its spread to bones (Dr. J. Eisman, Professor T.J. Martin).

Appendix 2

VICTORIAN MEDICAL RESEARCH WEEK

Medical Research Week aims to raise the public awareness of the important role of medical research in improving the quality of life for Victorians, now and in the future. Medical research has had and continues to have an impact on the health and well-being of the average person on a day-to-day basis, for example in areas of high blood pressure, allergy, arthritis.

Medical research is an area where Australia can justly be proud. Australians working in this country and overseas have won international respect. Victoria is clearly the pre-eminent State for medical research, gaining the lion's share of medical research funds in Australia. It is thoroughly appropriate that Victoria takes the initiative in proclaiming Medical Research Week.

Medical research, though not commonly regarded as such, is in fact a small but important industry employing substantial numbers of people on research grants, estimated at 7 to 10 million dollars annually, from Federal and overseas sources. Victorians also support medical research through a variety of other sources including direct donations to appeals. Medical Research Week, however, will NOT be in any way a fund raising exercise. Any individuals wishing to make donations are directed to established charitable foundations.

Medical Research Week has an important educative function and maximum participation of school children, for example by way of school excursions, has been a basic aim.

BACKGROUND

The Australian Society for Medical Research (ASMR) is a multi-disciplinary national association of Australian medical research workers, formed to support and promote medical research in Australia and to provide a forum for scientific interchange, i.e. the annual scientific meeting. At present, there is an acute shortage of funds for medical research which is of great concern to the A.S.M.R.

The National Health and Medical Research Council (NH&MRC), which distributes the Commonwealth Government's medical research funds, is a branch of the Federal Health Department. Its budget this year was 18 million dollars which is a significant increase over previous years. However, funds for medical research still represent only a tiny fraction of the total expenditure on health which was about $9,000 million or roughly $640 per capita. By contrast, research funding represents only about $1.30 per capita or less than the price of two packets of cigarettes!

Because of this poor funding, some hundreds of research projects proposed by Australian medical researchers and judged by national and international examiners to be of international standard and which should

Created with Scanner Pro

be funded, have NOT been funded. It is inevitable that if this continues these highly skilled and highly trained people, this invaluable national resource, will be lost from research to the private sector or worse still to other countries.

Australia has a poor record in terms of medical research funding. In 1978, Australia spent only about half as much as Canada, U.K. or New Zealand and about 1/13th as much as U.S.A. per capita on medical research.

It seems unreasonable that Australia's medical research commitment represents less than 1/5th of 1% of its Commonwealth health care budget. The costs of research have increased due to the increasing sophistication and complexity of research tools necessitated by the advances, which have already been made. Of course, inflation increases the costs of materials and technical assistance as well.

If the NH&MRC budget fails to grow to cope with these increased demands and no other source can be found, medical research in Australia will suffer a setback from which it would take years to recover even in the presence of unlimited funds. It is vital to have a solid backbone of medical research in our country to ensure that the Australian community benefits rapidly but appropriately from international advances in health care. It helps to ensure that Australians receive the most up-to-date health care without the slavish following of extravagant overseas fads which may be quite inappropriate for Australian conditions. Our medical researchers play a major role in the training of our doctors and in this time of escalating health costs can help to control these costs by inculcating an appropriate scepticism for the newest drug or therapy.

We do not believe that the Australian public are aware sufficiently of the international standing of its medical research community, nor that any cost benefit analysis favours a strong research component. The Australian Society for Medical Research would like to acquaint the public with these facts and to gather public support for increased funding for medical research in Australia, both through the NH&MRC and from the public if they wish to make donations to recognised funding bodies.

WHY SUPPORT MEDICAL RESEARCH?

To justify an increase in funds for medical research in Australia, two things would appear necessary : to show that medical research is worth doing in a global sense, and to show that it is worth Australia's while making a larger contribution.

In the nature of research - because it looks at what is not known - it is impossible to make particular cost-benefit analyses for the future. In terms of the relatively recent past, there can be no argument about cost-benefit. The development of drugs effective in the treatment of tuberculosis, the Pap smear, safe and effective drugs to treat high blood pressure, have all been boons to the community at large, both in terms of the health of a significant proportion of the community, and the overall cost of health care. The discovery of an effective polio

Created with Scanner Pro

vaccine saves the U.S. community each year more than the entire medical research budget. The halving of the inpatient population in psychiatric hospitals, similarly an enormous saving, is also largely due to the development of effective antipsychotic drugs over the past two decades.

Sometimes, while such inescapable advances are acknowledged, the question is asked more particularly about the seventies : Where were the break-throughs? What has been the pay-off for our investment during this decade?

There are two things worth saying in response. First, the payoff in the seventies will reflect research activity in the seventies, but perhaps more closely that of the sixties and fifties. Secondly, the seventies saw a variety of significant advances, to be detailed below - but none as arresting as penicillin or polio vaccine.

Areas where significant advances have been made in the past decade, and in which Australia played some part, are:

- Infantile gastritis: viral isolation and therapeutic restoration of blood volume means that children no longer die.

- Juvenile leukaemia: the cure rate is approaching 50%, from combined cytotoxic and x-ray therapy.

- Mania: the introduction of lithium has proven a turning point in treatment.

- Microsurgery: in the Australia context, the pioneering of the toe/thumb transposition technique.

- Insulin delivery systems: to permit continued euglycaemia with the aim of minimizing the complications of diabetes.

- Evaluation of anti-hypertensives: on a population basis, to which Australian trials have made a large contribution.

A second list of advances of the seventies, where overseas findings have been rapidly put into practice - and sometimes refined and extended - by trained local people, usually in positions with a substantial research component, includes:

- The introduction of cimetidine, which has revolutionized the management of peptic ulcer.

- The use of bromocryptine in infertility.

- Use of tricyclic antidepressants, allowing effective treatment of many cases of depression by general practitioners.

- Cytotoxic and anti-hormone adjuvant theapy in breast cancer, which has improved both prognosis for patients without advanced disease and quality of life for those with disseminated malignancy.

- The emergence of effective and acceptable UV-blockers into everyday use for the prevention of skin cancer.

Created with Scanner Pro

The final list - which could be much longer, if space permitted, than the two above - is of areas of advance where we have neither significantly contributed nor are in a position to derive maximal benefit.

One of the common misconceptions about the benefits of research is that the important advances ('breakthroughs') are all on the level of life and death, blood and thunder. Often forgotten are the quality-of-life dimensions - so that the introduction of logical, effective treatment for migraine or dysmenorrhoea may not be as dramatic as penicillin or polio vaccine, but should not correspondingly be discounted.

If we look over the past decade, there are areas where Australia has made a contribution, there are areas where we can utilize advances made elsewhere, and there are areas in which we are miles behind. The extent to which a community, through its elected government, supports medical research is in large part a value judgement. If the level of support in the U.K. is twice that here, are we thus saving money - or are the British investing it? Is the investment solely in terms of tomorrow's drugs, next years treatment, the breakthrough of the eighties - or is it in terms of a national resource, a group of Australians making a significant contribution to the international pool of knowledge?

To those who know nothing about physics or cosmology, it is still a source of pride that Australia makes an outstanding contribution to the field of radioastronomy. The justification of increased government funding for medical research over the next decade is that there exists in Australia a growing group of enthusiastic and talented workers, who given modest support can similarly be expected to make an outstanding contribution. We have a long history of using discoveries made and techniques developed overseas, we are now in the position, in manpower terms, of being able to attempt to redress that inbalance.

Dr Nigel Gray,
The Anti-Cancer Council of Victoria,
90 Jolimont Street,
EAST MELBOURNE Vic. 3002.

Dear Dr Gray,

On behald of the members of the Medical Record Association of Australia I would like to express our appreciation of your generosity in allowing us to use your computer facilities for the production of our membership register. Already, in the short time it has been in use, it has speeded up the production of lists and labels etc. and enabled us to keep the membership list up to date.

We will of course expect to reimburse the Council for any expense incurred and I shall speak to Adrienne Mursell concerning this at the next Council Meeting at the end of this month.

Again my thanks and best wishes,

Yours sincerely,

Betty James

RECEIVED
27 JAN 1982

...Nigel Gray, Director
...ti-Cancer Council of Victoria
90 Jolimont Street
East Melbourne, Victoria 3002
Australia

Dr. Vella Venanzio
27 Gayton House, Knapp Road E 3
London U.K.

Dear Sirs
I am an Italian doctor born in Tripoli on I7/9/54 and resident in Rome via Mario Fani I70.
I graduated in Medicine and Surgery from the University of Rome on 3/II/78 with full marks and honours.
Since january I978 I have been attending the Pediatric Department of the University of Rome and I got on I5/7/8I the diploma in Pediatrics.
Since january I979 ,I have been also attending the Epidemiology Department of the Istituto Superiore di Sanità(National Institute of Health)in Rome,working in the field of epidemiology concerning the diseases of pediatric age.
From september I98I to september I982,I have been awarded a fellowship from the University of London (J.F.H.Knight Fellowship) and I am now attending a Master of Science course in Epidemiology at the London School of Hygiene and Tropical Medicine.

I am very interested in the epidemiology concerning the pediatric oncology (specially leukemia and lymphomas) and I would like to work in this field when I'll come back to Italy.
But, I need more training in a Country with a strong tradition in the epidemiology of cancer,like Your Country, and I would like to know if it could be possible to have from Your Organization a grant in order to attend a P.H.D program in Pediatric Oncology at an Australian University.

Sincerely yours Vella Venanzio

Vella Venanzio

London I2/I/I982.

ISTITUTO SUPERIORE DI SANITÀ
VIALE REGINA ELENA, 299 - 00161 ROMA

20/I2/8I

Telegrammi: ISTISAN - ROMA
TELEX RM071 ISTISAN

I have known doctor Vella Venanzio since january I979 ,because I have been the supervisor of his activities in this laboratory of epidemiology.

During this period Dr. Vella carried out epidemiological researches in the field of infant mortality,child respiratory infections, celiac disease and about the application of screening to newborn babies suffering from metabolic disorders.

Dr. Vella showed a remarkable preparation,spirit of enterprise, capability of organization,seriousness and attention in performing the above mentioned researches.

In my opinion Dr. Vella is seriously motivated toward epidemiology; since he is very mature,responsible and with a high spirit of adaptation,I think that he will succeed in postgraduate research work .

I think that it is essential for his professional preparation,to attend a P.H.D.. program in epidemiology or an equivalent training, because in Italy there are not post-graduate courses in this science.

Considering the importance that public health will certainly have in Italy for the next future,I think that it will be very important to have doctors with a strong preparation in this field.

I believe that,if Dr. Vella will have the opportunity to attend a P.H.D. program in epidemiology in a Country with a long tradition in this science like Australia ,he could be very usefull for his Country.

Sincerely yours Donato Greco. M.D.

Mr. D. H. Hume,
Chairman,
Finance Committee,
Anti-Cancer Council of Victoria,
90 Jolimont Street,
EAST MELBOURNE, VIC., 3002

Dear Mr. Hume,

I am in the process of re-furnishing part of my home and have a number of chairs and other furniture which I would like to get rid of.

I cannot see my way clear to wholly donate these articles to the Council's Opportunity Shop, but I would be prepared for them to be sold by the Shop on a 50/50 basis.

Naturally I do not want to go against Council's policy on these matters, and would like the Finance Committee to advise me.

Yours sincerely,

(Arnold Wittner)

The Hon. General Editor,
Who's Who in the Commonwealth,
International Biographical Centre,
Cambridge, CB2 3QP, ENGLAND.

Dear Sir,

We wish to acknowledge having received correspondence from you today addressed to the following people in their capacity as representatives of the Anti-Cancer Council of Victoria -:

Mr. T. H. Ackland

Professor R.C. Bennett

Mr. R. L. Bienvenu

Mr. F. A. Johnston

The Right Hon. The Lord Mayor of Melbourne

While the first three people are still associated with the Council, we wish to advise that we have no records of a Mr. F. A. Johnston and that the position of Lord Mayor of Melbourne no longer exists. Accordingly we have forwarded the correspondence to the first three mentioned names.

To assist you in directing future correspondence to our organisation, we enclose lists of members of senior staff, executive committee, finance committee and medical and scientific committee.

Yours sincerely,

(Adrienne J. Holzer)
Secretary to the Council

Schenker & Co. (Australia) Pty. Ltd.

INTERNATIONAL AIR-SEA FORWARDERS CUSTOMS AGENTS.

YOUR REF. OUR REF.

Anti-Cancer Council of Vic.,
90 Jolimont Street,
EAST MELBOURNE VIC. 3002

Dear Sir/Madam,

We would like to advise you of a recent amendment to Section 183 of the Australian Customs Act. One part of the amendment is of particular importance to us as your customs agents, because the amendment to this section now empowers the Bureau of Customs to call for written evidence at any time that we, Schenker & Co. (Aust) Pty.Ltd. are your duly appointed and authorised customs clearing agent.

This amendment to the customs act as well as increasing pressure from Airlines/Shipping Co's. to be able to prove that we are your agents, brings us to request from you a new letter of authority. Basically, all this has to be is a letter addressed to:

TO WHOM IT MAY CONCERN:

This is to notify you that as of 1/1/81 Schenker & Co. (Aust) Pty.Ltd. are our appointed Customs Clearing Agents, and all relevent import documents should be handed to them immediately.

Signed.....

The above letter should be on your company letterhead, and sent to us at your earliest possible convenience to prevent any unforseen delays in the customs clearance of your consignments.

Should you have any questions regarding this, please feel free to contact the writer. Thanking you in anticipation of your co-operation.

Yours faithfully,
Schenker & Co. (Aust) Pty.Ltd.

Jon Linton.
Customs Manager.

• SEE OVERLEAF FOR TRADING CONDITIONS

Created with Scanner Pro

TRADING CONDITIONS

1. All and any business undertaken by SCHENKER & CO. (AUST.) PTY. LTD. (hereinafter called "the Company") is transacted subject to the conditions hereinafter set out and each and every condition hereinafter set out shall be deemed to be a condition of any agreement between the Company and its customers at this time and in future.
2. The Company is not a common carrier and does not undertake the obligations or liability of a common carrier and it is hereby expressly agreed by and between the Company and the Consignor that the Company shall not be liable to be sued in like manner as if he had actually undertaken to carry the goods as a common carrier for hire. The Company may refuse to accept for carriage any goods or any class of goods at his absolute discretion.
3. Whenever the Company is instructed to undertake or arrange transport, storage or any other service, it shall be authorised to entrust the goods or arrangements to third parties subject to the latters' contractual conditions. The customer shall be bound by such conditions and shall indemnify the Company against any claims arising out of their acceptance.
4. Customers entering into transactions of any kind with the Company expressly warrant that they are either the owners or the authorised agents of the owners of any goods or property the subject matter of the transaction, and by entering into the transaction they accept these conditions for themselves as well as for all other parties on whose behalf they are acting.
5. Subject to express instructions in writing given by the customer, the Company reserves to itself complete freedom in respect of means, route and procedure to be followed in the handling and transportation of goods. Senders, owners and consignees guarantee payment of all charges and advances.
6. The Company is entitled to retain and be paid all brokerages, commissions, allowances and other remunerations customarily retained by or paid to Shipping and Forwarding Agents and Insurance Brokers.
7. Quotations are given on the basis of immediate acceptance and subect to the right of withdrawal or revision. If any changes occur in the rates of freight, insurance premiums or other charges applicable to the goods, quotations and charges shall be subect to revision accordingly with or without notice.
8. The Senders, Owners and Consignees of any goods and their agents, if any, shall be deemed to be bound by and to warrant the accuracy of all descriptions, values and other particulars furnished to the Company for customs, consular and other purposes and they undertake to indemnify the Company against all losses, damages, expenses and fines arising from any inaccuracy or omission, even if such inaccuracy or omission is not due to any negligence.
9. The Company shall not be liable under any circumstances for any loss, damage or expense arising from or in any way connected with marks, weight, numbers, brands, contents, quality or description of any goods.
10. The Senders, Owners and Consignees and their agents, if any, shall be liable for any duty, tax, impost or outlays of whatsoever nature levied by the authorities at any port or place for or in connection with the goods and for any payments, fines, expenses, loss or damage incurred or sustained by the Company in connection therewith.
11. No insurance will be effected except upon express instructions given in writing by the customer and all insurances effected by the Company are subject to the usual exemptions and conditions of the policies of the insurance company or underwriters taking the risk. The Company shall not be under any obligation to effect a separate insurance on each consignment but may declare it on any open or general policy. Should the insurers dispute their liability for any reason the insured shall have recourse against the insurers only and the Company shall not be under any responsibility or liability in relation thereto, notwithstanding that the premium upon the policy may not be at the same rate as that charged by the Company or paid to the Company by its customer. The Company will under no circumstances be regarded as an insurer of the goods and is expressly excluded from liability through loss, damage or non-delivery.
12. The Company shall not be liable for loss of or damage to goods unless such loss or damage occurs whilst the goods are in the actual custody of the Company and under its actual control and unless such loss or damage is due to the wilful neglect or default or negligence of the Company or its own servants.
13. The Company shall not in any circumstances be liable for damages arising from loss of market or attributable to delay in forwarding or in transit or failure (not amounting to wilful negligence) to carry out the instructions given to it.
14. It is hereby agreed by and between the Consignor and the Company that any liability of the Company on whatsoever ground arising shall in every case be limited in amount to the sum of $20 in respect of all the goods listed in these Forwarding Instructions whether or not there has been any declaration of value of the goods or of any of them by the Consignor for the purposes of carriage or otherwise.
15. (a) In the case of goods of a value exceeding $200 per package or unit or the equivalent of that sum in other currency, the value will not be declared or inserted in the Bill of Lading for the purpose of extending the Shipowners' liability under Articles IV, Rule 5 of the Carriage of Goods by Sea Act, 1924, except upon express instructions given in writing by the customer.
    (b) In the case of Carriage by Air, no optional declaration of value to increase the Air Carrier's liability under the Carriage by Air Act, 1932, Articles 22 (2) of the First Schedule will be made except on express instructions given in writing by the customer.
    (c) In all other cases where there is a choice of tariff rates according to the extent of the liability assumed by carriers, warehousemen or others no declaration of value (where optional) will be made for the purpose of extending liability, and goods will be forwarded or dealt with at owners' risk or other minimum charges, unless express instructions in writing to the contrary are given by the customer.
16. Instructions to collect payment on delivery (C.O.D.) in cash or otherwise are accepted by the Company upon the condition that the Company in the matter of such collection will be liable for the exercise of reasonable diligence and care only. The Company accepts no liability where upon delivery of the goods payment is not made unless express instructions are received that such goods are not to be delivered without the payment.
17. Perishable goods, which are not taken up immediately upon arrival or which are insufficiently addressed or marked or otherwise not identifiable, may be sold or otherwise disposed of without any notice to the Senders, Owners or Consignees of the goods, and payment or tender of the net proceeds of any sale after deduction of charges shall be equivalent to delivery.
18. Non-perishable goods which cannot be delivered either because they are insufficiently or incorrectly addressed or because they are not collected or accepted by the Consignee may be sold or returned at the Company's option at any time after the expiration of 21 days from a notice in writing sent to the address which the Sender gave to the Company on delivery of the goods. All charges and expenses arising in connection with the sale or return of the goods shall be paid by the customer. A communication from any agent or correspondent of the Company to the effect that the goods cannot be delivered for any reason shall be conclusive evidence of that fact.
19. Except under special arrangements previously made in writing the Company will not accept or deal with any noxious, dangerous, hazardous or inflammable or explosive goods or any goods likely to cause damage. Any person delivering such goods to the Company or causing the Company to handle or deal with any such goods (except under special arrangements previously made in writing) shall be liable for all loss or damage caused thereby and shall indemnify the Company against all penalties claims damages costs and expenses arising in connection therewith and the goods may be destroyed or otherwise dealt with at the sole discretion of the Company or any other person in whose custody they may be at the relevant time. If such goods are accepted under arrangements previously made in writing they may nevertheless be sold, destroyed or otherwise dealt with if they become dangerous to other goods or property. The expression "goods likely to cause damage" includes goods likely to harbour or encourage vermin or other pests.
20. Except under special arrangements previously made in writing the Company will not accept bullion, coins, precious stones, jewellery, valuables, antiques, pictures, livestock or plants, and the Company will not accept any liability whatever for any such goods except under special arrangements previously made in writing.
21. Pending forwarding and delivery, goods may be warehoused or otherwise held at any place or places at the sole discretion of the Company at the owner's risk and expense.
22. All goods (and documents relating to goods) shall be subject to a particular and general lien for monies due either in respect of such goods or for any particular or general balance or other monies due from the Senders, Owners or Consignees to the Company. If any monies due to the Company are not paid within one calendar month after notice has been given to the person from whom the monies are due to his or her last known address that such goods are detained, they may be sold by auction or otherwise at the sole discretion of the Company and at the expense of such person, and the proceeds applied in or towards satisfaction of such particular and general lien. Money due to the Company must not be withheld pending payment of claims lodged against the Company.
23. The servants, employees and agents of the Company shall be entitled to the benefit of all provisions in these conditions which exclude or restrict tortious liability of any kind, and no such servant employee or agent shall be liable to any person as agent of the Company whether acting on his or her own behalf or as servant employee or agent of the Company.
24. The Company shall not under any circumstances be liable for loss or damage resulting from fire, water, explosion or theft, whether caused by negligence of the Company's servants or otherwise.
25. In the event of unexplained loss of goods in the custody of the Company the liability of the Company shall not exceed the limits defined in paragraph 14 of these Conditions.
26. Notice of any claim by the consignor on any ground of liability with respect to the goods or any of them or the forwarding or carriage thereof against the company must be given in writing stating the nature, grounds and amount of the claim and details of the goods in respect of which it is made by the consignor to the Company at the head office of the company within 90 days of the date on which the goods are delivered by the consignor into the actual physical custody of the company as its agent, otherwise the consignor shall be deemed to have waived and abandoned completely any claim which he might have against the company on any ground of liability in respect of the goods or any of them or the forwarding or carriage thereof, and no such claim shall, in default of such notice as aforesaid, after the expiration of such 90 days be allowable or admitted; and time shall be the essence of this clause.

Without prejudice to any other of the provisions of these instructions, this contract or any contract which the company may make pursuant to its authority hereunder, and any contract which may be made by any person, firm, or company to whom the company has delegated such authority pursuant hereto, shall be further subject to all terms, conditions, and requirements which may be imposed on or with respect to or in connection with the goods or any of them, or the forwarding carriage, or storage thereof, by any port, harbour, dock, railways, shipping, airways, or any other public authority or by any government department or person into whose hands it may become necessary to entrust the goods or any of them, or to whose control the goods or any of them may become subject, in transit to the consignee; and all further or additional charges which may be or become ascertained and payable with respect to or in connection with such goods or the forwarding, carriage, or storage thereof by reason of any such terms, conditions, or requirements shall become and be payable in like manner as provided.

The use of Clients' own forms is no derogation of these Conditions.

Miss A.J. Holzer,
Secretary,
Anticancer Council of Victoria,
90 Jolimont Street,
EAST MELBOURNE. VIC. 3002

Dear Miss Holzer,

As pharmacists involved in the field of Oncology, we saw the need for a comprehensive manual for the clinical use of antineoplastic agents within Australian hospitals. We have managed to produce such a manual, entitled "Clinical Guidelines for the Use of Antineoplastic Agents".

The manual is comprised of a Preface and 49 drug monographs. The Preface includes an introduction; classification of the antineoplastic agents; definitions; abbreviations; general patient advice; guidelines for the treatment of extravasation; optimal conditions for the handling, preparation and disposal of cytotoxic drugs; and a guide to intrathecal therapy.

Each antineoplastic drug is described under the following headings: synonyms, recommended abbreviation, pharmacological classification, mechanism of action, therapeutic indications, presentation and strengths available, storage, dosage, conditions requiring dosage adjustment, preparation, stability and storage of sterile solution after reconstitution, compatible fluids, hazards of administration, pre-therapy assessment, pharmacokinetics, toxicity and adverse reactions (acute,delayed, less common), interactions, patient advice, selected references, and investigational status of drug.

The drugs detailed in our manual include: Adriamycin, Aminoglutethimide, Amsidine, L-Asparaginase, Azacytidine, Bleomycin, Busulphan, Carmustine, Chlorambucil, Cyclophosphamide, Cytosine Arabinoside, Dacarbazine, Dactinomycin, Daunorubicin, Dibromodulcitol, Dibromomannitol, Estramustine Phosphate, Ethinyloestradiol, Etoposide, 5-Fluorouracil, Fluoxymesterone, Folinic acid, Fosfestrol, Hexamethylmelamine, Hydroxyurea, Lomustine, Medroxyprogesterone, Melphalan, 6-Mercaptopurine, Methotrexate, Mithramycin, Mitomycin C, Mitotane, Mustine Hydrochloride, Nandrolone, Norethisterone Acetate, cis-Platin, Prednisolone, Procarbazine, Semustine, Stilboestrol, Streptozocin, Tamoxifen, Teniposide, Thioguanine, Thiotepa, Vinblastine, Vincristine, Vindesine.

/Page 2

Created with Scanner Pro

The data contained in these monographs is taken from a wide range of up-to-date sources, including reviews of the individual monographs by the relevant drug companies.

Our manual has also been reviewed by two prominent medical Oncologists, Professor Martin Tattersall, Director of the Ludwig Institute for Cancer Research in Sydney and Senior Vice President of C.O.S.A., and Dr. John Levi, Head of the Department of Oncology at the Royal North Shore Hospital, Sydney. Both feel that it is a worthwhile publication and the forward will be written by Professor Tattersall.

The manual is now ready for publication and we are seeking support from C.O.S.A., the Australian Cancer Society and the various State Cancer Councils, as we believe that the manual will contribute to the care of the cancer patient and the development of oncological services in Australia.

We have investigated publication costs and estimate that financial support in the region of $500 from each of these groups will cover the cost of publication of the first 200 copies.

We intend that the data contained in the manual be current and thus each monograph will be reviewed annually.

At your earliest convenience, we would like to know whether your group would be interested in supporting our manual.

Yours faithfully.

Anne de Fraine Georgina Granger Jenifer Diekman

JOINT COMMITTEE ON NEW TECHNOLOGY

Newsletter April, 1980

University not to establish consultative committees

One of the major themes that emerged from the forums and the film "The Chips Are Down" was that close and continuing liaison and negotiations between employers and employees are essential to alleviate the disruption and loss of employment that the unbridled introduction of new technology brings with it.

When this Committee met with the Staff Officer it was made clear that the decision to introduce new techological equipment was in the hands of heads of sections and so the Committee suggested that either an administration-employee committee be established to monitor such decisions, or that the Committee be permitted to approach heads of sections. A detailed case for the need of such consultation was presented (see below) but the Vice-Chancellor has refused to establish such a joint committee and states that he is unwilling

> "to set up formal machinery for the routine interrogation of departmental heads on their plans to purchase equipment which they see as necessary to maintain and improve the effectiveness of their operations".

This attitude, together with the statement:

> "It is incumbent upon the University to make such uses of its limited physical, financial and human resources as will best achieve the University's objectives of teaching, scholarship and research",

give this Committee the impression that when a choice between staff welfare and employment and/or the University's objectives is to be made, the latter will take precedence.

The only role acknowledged by the Vice-Chancellor as appropriate for the Committee is to raise problems as they occur.

This Committee is currently collecting data from various sections of the University where new equipment is being introduced and will prepare reports on these for discussion.

The Committee members also invite staff who are having problems as a result of the introduction of new technological equipment to contact them.

The Committee will place any relevant new information before staff members as material from Monash University and from the outside community comes to hand.

The Case for a Monash University Consultative Committee on New Techology

Following are extracts from a letter written to the Vice-Chancellor supporting the establishment of a Consultative Committee:

> From discussions with the Staff Officers it is clear that the Committee needs access to the heads of sections in the University to ensure that the acquisition of new technological equipment in each area is in the best interests of all University staff.
>
> In general terms the Committee is convinced that the continuing evolution of ever more sophisticated and labour-saving computer-based technology and the pressure on universities to cut wages costs will inevitably create continuing problems for present and future staff at Monash University. The Committee feels that given its proper rights it could play a role in alleviating the disruptive effects on staff caused by this process, and it offers itself in that capacity.

..2

Created with Scanner Pro

The section of the Leicester Study Leave Report, presented and acclaimed at Council, which deals with the possible introduction of N.T. at Monash, would, if implemented, even only in part, have serious effects on staffing levels in Administration. The report gives the feeling of reality and urgency to the problem.

The Committee also has close links with staff members and the Trade Union Movement which would enable it to alert the University to the difficulties being experienced both in Australia and overseas. Through these same links we would hope to ensure that the standards of staff members at Monash who work with new technological equipment are safeguarded.

Some of the problems the Committee is looking at now and which it may wish to discuss with the University administrators include:

1. The purchase of appropriate equipment

The choice of computer-based equipment and the loss of staff from the University as a necessary result of such purchases is frequently irreversible.

If the capital item does not provide the service or give the labour savings envisaged the work pressure on remaining staff is increased and the lost staff position is unlikely to be reestablished.

We believe the Joint Committee on N.T. could help to ensure that these problems are examined when decisions are being made thus avoiding any damage to staff and efficiency.

2. Stress on New Technology Users

Discussions with Library members have indicated that the staff disruption arising from the introduction of Cavall is such that morale has been lowered and the stress on the staff significantly increased.

The Committee wishes to ensure that the rate of introduction, and the type of N.T. at Monash is such that stress is kept to a minimum.

The Committee is particularly concerned about the effects on older staff members who use N.T.

3. Retraining of staff

In the present piecemeal introduction of N.T. it seems unlikely that the retraining of staff made redundant by new equipment will be given due consideration.

The Committee sees a role for itself in ensuring that proper arrangements are made by each department or by the University as a whole for retraining staff where decisions make staff redundant.

4. Relief and Back-up staff

Already there is concern that the loss of staff caused by the introduction of word-processors has placed the burden of typing upon too few people. The Committee feels that unless adequately trained relief and back-up staff are provided throughout the University legitimate leave arrangements are likely to be difficult to arrange for staff so central to departments' efficient operation.

5. Classification

A case is currently before the Public Service Arbitration for rates of pay for word processor operators. *

The Committee sees as part of its role ensuring the provision of proper loadings for staff operating any computer-based equipment, including word processors.

*($15 per week rise granted, reported in The Australian 17/3/80)

..3

Created with Scanner Pro

6. Redundancies

The rapid introduction of N.T. at Monash would create redundancies. We believe that part of our role should be to moderate the rate of introduction to such a level that redundancies are either avoided or satisfactory redundancy agreements negotiated for our members.

7. The Level of Staffing

While the pressure to reduce costs makes it difficult to resist the acquisition of labour-saving devices, as a public institution expending taxpayers' moneys, the University does have a responsibility to the community to aggravate unemployment levels as little as possible.

It is therefore essential that substantial advantages in costs and efficiency can be shown to exist before N.T. decisions are made.

The loss of qualified staff from the University below a certain minimum level would mean the loss of services to the teaching and research functions of the University, and so to the students, even when a substantial amount of support staff work is done by machines.

By analogy with the printing industry it could even mean the expenditure of academic staff time in preparing notes, and manuscripts on word processors - all this on high salary rates.

8. Non-academic to academic staff ratios

The ratio of non-academic to academic staff has declined considerably over recent years. It is understood that these trends will continue. We fear on the one hand that N.T. will accelerate this decline and on the other hand that service to academic staff would decline, were the ratios to drop below the present level.

9. Health Aspects of New Technology

It has been shown historically that the rapid introduction of new work methods and the concomitant rapidly changing working conditions have invariably had unforeseen and usually detrimental effects on the health of workers.

Evidence is already beginning to accumulate that computer-based technology is no exception.

The detrimental effects of visual display units on operators' health is increasingly being recognised, as are the effects on mental health with the introduction of some N.T.

The Committee would seek to ensure that Monash University considers the social costs of this aspect of N.T. before its introduction, and that it keeps abreast with the latest information on this topic, so that the best possible working conditions can be maintained for our staff.

13.6.1980

Miss Pamela Morison,
2/8, Richards Avenue,
Glen Iris, 3146.

Dear Miss Morison,

Your letter saddened me, since one would hope that the work of such a widely based body of dedicated workers and professionals would not be dismissed from support because of antipathy to the views of any one person who serves the Council.

In my own life's experience I have seen a great deal of human suffering and have spent considerable time in countries which have vast deficiencies in food, housing and living standards. Others, like Japan, who need no instruction as to the horrors of nuclear destruction, have the ability, technology and desire to use nuclear energy peacefully to solve the quite appalling problems which are being experienced by those who, unlike ourselves, do not have alternative sources of energy.

The use of nuclear energy has already been widely accepted on the American continent, in Europe, Russia, China and Japan, and with the energy needs of the world mounting, will surely increase.

A late 20th century world cannot return with its huge population needs to simple concepts of wood, brick, individual heating, and agricultural economy.

I believe personally that the resources of the earth should not be regarded as the unique property of those who occupy the land in which they are found, but should rather be regarded as something held in trust for mankind.

If we, in our fortunate position of a small population richly served in land and energy, deny these resources to a hungry, needy world, I believe that it will, in the end, amount to an arrogance which will deservedly result in our having them taken from us.

There are many problems arising out of the use of every major source of energy and power, and certainly serious problems posed by nuclear power generation; but I do think that they are soluble by human ingenuity, and in any case are not as great as the situations arising from power shortage.

I respect your views and your sincerity otherwise I would not give time to a hand written personal letter.

I could only wish that you would at least credit me with equal integrity and sincerity in my views. They are certainly not motivated by what you term the "fast buck".

With thanks for your past assistance and best wishes.

Yours sincerely,

"E. E. Dunlop"

9 JUN 1980

Dear Sir Edward,

Two or three years ago I gave a donation to the Anti Cancer Council of Victoria. Each year since, I have received a letter soliciting further assistance.

I desire to say that for the time being I shall make no further donations

the Anti-Cancer Council, and do not wish to receive further correspondence.

I am not less concerned about the disease than I was previously, and I most strongly support preventive medicine, but your personal and public support to uranium mining has sickened me.

I find the prospects of harm to the world which may result from Australia's selfish folly (anything for the quick-buck, and let's not offend the multi-nationals!) horrifying in the extreme. It's time we gave thought to alternative life styles and technologies. May I

Mr. W. Bingham,
8 Dunstan Parade,
CAMPBELLFIELD, VIC., 3061'

Dear Mr. Bingham,

My apologies for the delay in replying to your letter of 21st July, 1980 but I have just returned from annual leave.

I was disturbed to read that you thought I had notified your Union as to who had donated money to the Council and who had not. This was certainly not done unless individual Union members asked for their receipt to be sent to the Union.

Your donation towards our work is greatly appreciated by us and I have enclosed our official receipt together with a copy of our last Annual Report which will give you some idea of the work that we do.

With best wishes,

Yours sincerely,

(Miss) (Adrienne J. Holzer)
Secretary to the Council

Dear Sir, or Madam.

I was disturbed to see you become part of this blackmail Scheme set up by my Union. I knew the money is badly needed and will be put to good use, but your Secretary didn't have to notify the Union on who has paid, which is up to each individual member to do so if he so wishes.

I have enclosed a copy of a letter I sent to J. McNeill and have had hundreds sent round other jobs where members have been boycotted for working on this project.

I am

Yours Sincerly

W Bingham

Amalgamated Metal Workers and Shipwrights Union
Victorian State Council

19th March, 1980.

JH:HZ

Dear Fellow Member,

I have been advised by the Anti-Cancer Council that Bro. recently donated the sum of $250.00 to assist the work of the Council.

The donation is appreciated by the Council and the Union.

Yours fraternally,

JOHN HALFPENNY,
STATE SECRETARY.

Give a gift...and get a job

A MAJOR union is offering amnesty to workers switching from the blackbanned Newport power station.

The Amalgamated Metalworkers and Shipwrights' Union is asking the workers to donate $250 to the Anti-Cancer Council of Victoria.

But after March 24 the donation doubles to $500.

If workers from the Newport site comply with this condition, the AMWSU will not take action against them when they seek further employment.

The row over ex-Newport workers flared at the BP Refinery at Crib Point last week.

About 13 AMWSU members, who had worked at Newport, were blackballed by other AMWSU workers at the refinery.

By BEN AINSWORTH

Another 17 members of the Federated Mineworkers' Association got similar treatment from AMWSU members.

About 100 AMWSU members at the refinery walked off the job last week in protest at employment of the ex-Newport workers.

The strikers decided to return to work yesterday morning after the ex-Newport workers agreed to donate $250 to the Anti-Cancer Council.

It is believed the council received more than $7000 yesterday in donations from ex-Newport workers.

More than 1500 workers have been involved over the past three years at the Newport site.

The Trades Hall Council banned the power station six years ago on environmental grounds.

But the 1500 workers ignored the ban and the station is now due to be completed late this year.

AMWSU state secretary, Mr John Halfpenny, said last night that the Newport workers had seen the error of their ways and wanted to be forgiven.

He said the Anti-Cancer Council was seen as an appropriate charity because of its research into all forms of cancer.

27/2/80 $250

FILE Scrapbook

gifts out of the blue

By JIM FOLEY, Herald Industrial Affairs Reporter

Workers switching from the black-banned Newport power station to other jobs are making cash gifts to charity.

The gifts are generally around the $250 mark — to the Anti-Cancer Council.

The secretary of the Amalgamated Metal Workers and Shipwrights' Union, Mr John Halfpenny, said today.

"A large number of former Newport workers have now become conscience stricken and wish to ease their burden by donating sums of money to the Anti-Cancer Council to help fight the effects of pollution and other cancer causing substances and activities in our society."

He said that yesterday about 15 people called at the union office wishing to make payments.

"It was nothing to do with us so we referred them to the Anti - Cancer Council," he said.

The deputy director of the council, Mr David Hill, said today there had been an increase in $250 gifts.

"We haven't asked where they come from, but they have been most welcome," he said.

Mr Hill said the money went towards research, education and the welfare of cancer patients.

Mr Halfpenny said he understood the matter was being dealt with on an individual job level.

"We have had problems on a few jobs among members concerned about the presence in their midst of workers who defied the Trades Hall Council policy and worked on Newport," he said.

Newport workers pay a price for forgiveness

AGE 28/2

On the industrial front

Workers on the black-banned Newport power station can buy "forgiveness" with a $250 donation to the Anti-Cancer Council of Victoria.

About 30 workers from Newport have already made their donation and been accepted on other sites by members of the Amalgamated Metal Workers and Shipwrights' Union.

The secretary of the union, Mr. John Halfpenny, said last night "lots of people" had come forward and made a donation to redeem themselves in the eyes of their fellow workers".

Mr. Halfpenny said the idea of a donation "just developed as a suggestion and swept around the construction industry like wildfire.

"A number of people who worked at Newport have been overcome by their own conscience and perhaps purged their guilt by making a contribution to a socially worthy cause," he said.

The union has agreed to take no action against workers from Newport who make the donation and recognise "that a further such serious breach of trade union policy will not be tolerated".

But it had suggested that Newport workers who wait until March 24 will have to make a donation of $500 to the council.

Universal Personal Badges

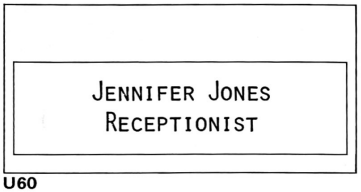

Universal Personal Badges have been developed for use on many occasions when you wish to identify persons by their names, positions, etc. They are now widely used in hotels, departmental stores, hospitals and at exhibitions and conferences. The badge is light, approximately 7 g. There are five different patterns to choose from, three of which can accommodate printing on the flat plastic front of the badge. On the back of the badge are two plastic clips for clipping the badge into the breast pocket AND a brooch pin for fastening to clothing – you use whichever you prefer. The pin is made from non-rusting material and suitable for use in countries with high humidity. The names of the wearers may be typed on the card inserts which are supplied in perforated strips enabling them to be completed quickly in a typewriter. The card insert is protected by a transparent window both of which are slid into the badge through an aperture at the top. The outlines of the badges shown below are actual size. If you type the wording you require on the badge on a piece of paper you can then check if this will fit.

U20

U40

U60

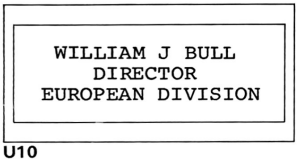

Badges printed with your name and symbol in your colours.

To choose the badge that is most suitable first decide on the exact wording and symbol that you want on the badge. If you wish to display your symbol prominently the U40 badge would probably be the most suitable as this has additional space on the left hand side. If you wish to show one or two lines of wording perhaps with a small symbol then the U20 or U60 badge would be more suitable. The outlines of the badges shown on the left are actual size and you may find it convenient to pencil-in the wording and symbol to see how it would look.

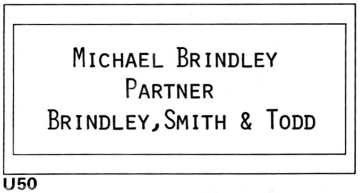

To print these badges we have to make a printing block or screen and there is a charge for this for each colour. In addition there is a printing charge per colour which varies according to the number of badges taken. The more badges the lower printing charge per badge.

U50

Unprinted Badges

These badges are similar to those illustrated overleaf except that the card occupies the whole of the front of the badge and there is no room for printing on the plastic frame. The outlines of the badges shown on the left are actual size. They are useful to have on hand when you wish to identify persons at short notice, for example, organisers of seminars, conferences and other social gatherings. Packed in boxes of 25.

Dear Miss Holzer,

It has come to my attention that you have been appointed Secretary to the Anti-Cancer Council of Victoria, and I would like to offer to you my congratulations and best wishes in this appointment.

You are possibly aware of the relationships between the Anti-Cancer Council and the Cancer Institute (Peter MacCallum Clinic). No doubt you will be fully committed for some time in this appointment but should you wish to visit the Institute to meet members of our staff and to view the premises, please do not hesitate to contact me for this purpose.

With best wishes,

Yours sincerely,

G. S. Bolitho

Mr D Hill
Editor
Victorian Cancer News
90 Jolimont Street
EAST MELBOURNE 3002.

Dear Mr Hill,

The November/December issue of "CANCER NEWS" and the comments of Dr Nigel Gray regarding food-cancer scares in the newspapers has again reaffirmed the Victorian Anti-Cancer Council's responsible way of presenting such matters to the public.

As generally acknowledged the plastics industry in recent months has come under attack from media speculations about a cancer link and PVC edible oil containers. Notwithstanding overwhelming world scientific opinion, media speculation continued causing unfounded and unwarranted concern.

It is refreshing therefore to see this highly respected publication place this aspect of the question of food and cancer in correct perspective.

We would be happy to assist your organisation, or readers of this journal, with any queries on matters of this nature.

Yours sincerely,

R A LESCHEN
Director
